## **AMENDMENTS TO THE CLAIMS**

## WHAT IS CLAIMED IS:

1. (Currently amended) A flowable granular adsorbate comprising: a granular pyrogenic silicon dioxide carrier, prepared by flame hydrolysis, spray drying and a heat treatment, said carrier having a surface, and at least one substance adsorbed on said surface, or enveloped therein, selected from the group consisting of a foodstuff additive, a feedstuff additive and a plant protection agent, wherein the silicon dioxide has the following characteristics:

Pore volume:

0.5 to 2.5 ml/g

Pore size distribution:

less than 5% of the total pore volume has a

pore diameter of less than 5 nm, remainder

meso- and macropores

pH:

3.6 to 8.5

Tamped density:

220 to 700 g/l

Average particle diameter:

10 to 120 μm

BET surface area:

 $40 \text{ to } 400 \text{ m}^2/\text{g},$ 

Particle size distribution:

80 volume % larger than 8 µm and 80 volume %

smaller than 96 µm,

wherein 0.001 to 200 g of substance is present per 100 g of silicon dioxide granule.

2. (Previously Presented) The granule according to Claim 1, wherein the foodstuff additive is a member selected from the group consisting of dyestuffs, antioxidants, preservatives,

emulsifiers, gelling agents, thickeners, binders, stabilizers, alkalis, acids, salts, antilumping agents, flavour intensifiers, sweeteners and aromas.

- 3. (Previously Presented) The granule according to Claim 1, wherein the plant protective agent is an herbicide, insecticide or fungicide.
- 4. (Previously Presented) The granule according to Claim 2, characterized in that the silicon dioxide granule is silanized.
- 5. (Cancelled)
- 6. (Previously Presented) The granule according to Claim 1 wherein the granule has meso- and macropores, the mesopores making up 10 to 80% of the total volume.
- 7. (Cancelled)
- 8. (Previously Presented) The granule according to Claim 4 which is silanized with a member selected from the group consisting of:

Halogeno-organosilanes of the type 
$$X_3Si(C_nH_{2n+1})$$
  
 $X = Cl, Br$   
 $n = 1 - 20$ 

Halogeno-organosilanes of the type 
$$X_2(R')Si(C_nH_{2n+1})$$
  
  $X = Cl, Br$ 

$$R' = alkyl$$

$$n = 1 - 20$$

Halogeno-organosilanes of the type  $X(R')_2Si(C_nH_{2n+1})$ 

$$X = Cl$$
, Br  
 $R' = alkyl$   
 $n = 1 - 20$ 

Halogeno-organosilanes of the type  $X_3Si(CH_2)m-R'$

- 9. (Canceled)
- 10. (Previously Presented) The granule according to Claim 1, characterized in that the silicon dioxide granules are silanized.
- 11. (Previously Presented) The granule according to Claim 1 in which a dyestuff is adsorbed on the surface thereof, or enveloped therein.
- 12. (Previously Presented) The granule according to Claim 1 in which an antioxidant is adsorbed on the surface thereof, or enveloped therein.

- 13. (Previously Presented) The granule according to Claim 1 in which a preservative is adsorbed on the surface thereof, or enveloped therein.
- 14. (Previously Presented) The granule according to Claim 1 in which an emulsifier is adsorbed on the surface thereof, or enveloped therein.
- 15. (Previously Presented) The granule according to Claim 1 in which a gelling agent is adsorbed on the surface thereof, or enveloped therein.
- 16. (Previously Presented) The granule according to Claim 1 in which a thickener is adsorbed on the surface thereof, or enveloped therein.
- 17. (Previously Presented) The granule according to Claim 1 in which a binder is adsorbed on the surface thereof, or enveloped therein.
- 18. (Previously Presented) The granule according to Claim 1 in which a stabilizer is adsorbed on the surface thereof, or enveloped therein.
- 19. (Previously Presented) The granule according to Claim 1 in which an alkali is adsorbed on the surface thereof, or enveloped therein.
- 20. (Previously Presented) The granule according to Claim 1 in which an acid is adsorbed on the surface thereof, or enveloped therein.
- 21. (Previously Presented) The granule according to Claim 1 in which a salt is adsorbed on the surface thereof, or enveloped therein.
- 22. (Previously Presented) The granule according to Claim 1 in which an antilumping agent is adsorbed on the surface thereof, or enveloped therein.
- 23. (Previously Presented) The granule according to Claim 1 in which a flavour intensifier is adsorbed on the surface thereof, or enveloped therein.

- 24. (Previously Presented) The granule according to Claim 1 in which a sweetener is adsorbed on the surface thereof, or enveloped therein.
- 25. (Previously Presented) The granule according to Claim 1 in which an aroma agent is adsorbed on the surface thereof, or enveloped therein.
- 26. (Previously Presented) The granule according to Claim 1 in which a feedstuff additive is adsorbed on the surface thereof, or enveloped therein.
- 27. (Previously Presented) The granule according to Claim 1 in which a chemical intermediate is adsorbed on the surface thereof, or enveloped therein.
- 28. (Previously Presented) The granule according to Claim 1 in which a plant protection agent is adsorbed on the surface thereof, or enveloped therein.
- 29. (Previously Presented) The granule according to Claim 1 in which an herbicide is adsorbed on the surface thereof, or enveloped therein.
- 30. (Previously Presented) The granule according to Claim 1 in which an insecticide is adsorbed on the surface thereof, or enveloped therein.
- 31. (Previously Presented) The granule according to Claim 1 in which a fungicide is adsorbed on the surface thereof, or enveloped therein.
- 32. (Previously Presented) The granule according to Claim 1 which is spherical.
- 33. (Previously Presented) The granule according to Claim 1 which further contains a natural or synthetic resin.
- 34. (Previously Presented) The granule according to Claim 1 which further contains at least one of an antifoam agent, peroxide, a stabilizer, a plasticizer, a free radical interceptor and a wetting agent.

- 35. (Previously Presented) The granule according to Claim 1 wherein the silicon dioxide envelops solid particles or liquid droplets of said substance.
- 36-38. (Canceled)
- 39. (New) The flowable granular adsorbate of claim 1 characterized as having good flowability (flow rating 2, slope angle  $< 40^{\circ}$ ).
- 40. (New) The flowable granular adsorbate of claim 1 characterized as being sulphate free.
